An ISO 9001:2015 Certified

MASTERBATCHES & COMPOUNDS

THE COMPANY PROFILE

BARJATYA POLYCHEM (BP) – A Jaipur-Rajasthan based company which is engaged in manufacturing of various types of Masterbatches and Compounds for Plastic Industries, since 2024.

Within a very short span of time various reputed companies have globally shown their confidence & trust in our products. The latest state of the art trusted machineries like Twin Screw Extruder, Single Screw Extruder, Kneader etc. along with highly upgraded and developed laboratory equipped with the best modern testing equipment.

The team is comprised of highly experienced, dedicated and professionally equipped staff. All these have contributed to the immense success & growth of BP over the period of time.

At present our product range consists of different kinds of Masterbatches and Additives used in different kinds of industries like Woven sacks, Furniture, Household, Automobiles, Home-Appliances, Films etc. suitable for Poly Olefin.

The company has been providing its best service to polymer industries by its quality products and competitive pricing policy. Presently BP is exporting masterbatches & filler compounds to countries like Nepal & Bangladesh is in a continuous process of expansion and growth with a vision of establishing itself across the globe as a premium manufacturer & supplier of plastic products in the coming years.

A GLANCE ON BARJATYA'S PLANT

- BP is an ISO 9001 : 2015 certified company.
- BP has designed separate machineries in one boundary to produce White, Colour, Black & Filler MB. Each production team is highly qualified & experienced in the respective areas.
- Quality being the prime objective for all BP products, we always use the best available raw materials sourced from the most reputed suppliers globally, so as to maintain consistency in our procurement policy and hence it directly reflects on our output in terms of our quality products.

PRODUCTION

BP has a current production capacity of 1800 Tons per year. The highly developed infrastructure and quality manpower resource is the backbone of the company's strength. The production unit is strategically located in terms of logistics to avail the best accessibility benefit (air, water & road) across the globe. The production team of BP has got an enriched combination of highly experienced & dynamic professionals.

The quality of the production has always been maintained to meet the client's needs and expectations. The various properties (i.e., Chemical & Physical Properties) of Masterbatches are tested by the experienced Polymer Engineers of BP to ensure the best quality of output. The management of BP is continuously in a process of bringing changes to ensure the increase of efficiency and overall output.

BARJATYA POLYCHEM

LABORATORY

BP has a highly developed laboratory to produce various colour masterbatches according to our client's requirement. Latest technology has been used to study various colour pigments, and they have succeeded to produce quality masterbatches for our perspective clients.

BP manufactures a comprehensive range of Colour Masterbatch products that are used extensively throughout the thermoplastics industry. We have a wide selection of standard colours available from stock, including a range of colours suitable for outdoor applications with excellent weathering properties. The range includes high opacity colours in addition to tints as well as specialties such as metallic, pearlescent, thermo chromic, and glow-in-the-dark effects. When required, we can provide products to meet the relevant food contact, toy, and waste packaging regulations.

For non-standard applications, we offer a rapid colour matching service, creating masterbatches specific to our customers' needs. Bespoke colours can be engineered to encompass a whole range of effects and finishes for some of today's most demanding markets. We can also develop and produce coloured products incorporating differing functional properties such as anti-static, UV stability, antibacterial, etc. Using our knowledge and experience, plus the latest colour matching, blending, and compounding equipment, we promise a responsive, high quality service.

APPLICATIONS OF BP COLOR MB:

- PP Filaments and Fibers.
- PP NON-WOVEN Fabric.
- Blow molding bottles for cosmetics, detergents, lubricants, large containers, jerry cans.
- Injection moldings specially for Chair, Crates, House ware items made from plastics like HDPE, PP, and HIPS. Pipes for irrigation and telecom ducting applications.
- Extrusion pipe, Profiles, Sheets, Thermoforming.
- Wire & Cables : Power & telecommunication cable insulation and sheathing.
- General purpose or commodity.

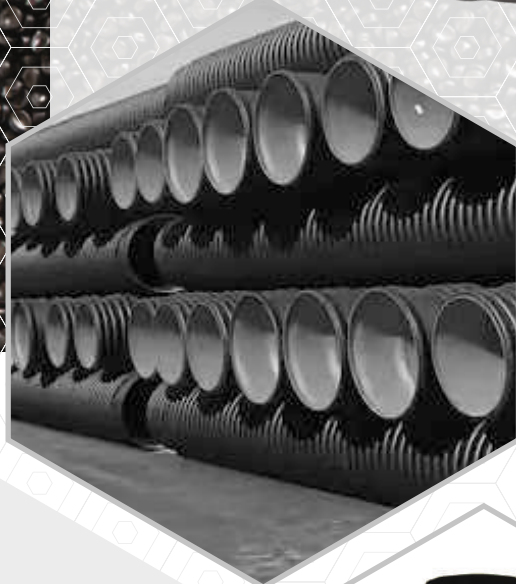

BLACK

MASTERBATCH

BP carbon black concentrates consist of a wide variety of pigment systems ranging from large to small particle sizes. This range of systems allows for tinting strengths of blue, jet black, and brown. These products can be used in a wide variety of polymer systems from LDPE, LLDPE, HDPE, and PP homo and co-polymers.

As leaders in black masterbatch technology for over two decades, we have achieved the most demanding performance requirements including UV, FDA, conductive, dispersion, and process ability.

Typical applications include film, tanks, pipe, fiber, and injection/blow molding. Industries served include agricultural, automotive, consumer products, industrial, and packaging.

APPLICATIONS OF BP BLACK MB:

- E films and laminated tarpaulin
- Rotomolded tanks, PP fibers and filaments
- HDPE pipes for agriculture and telecom duct pipes
- Engineering plastics and automobile industries

WHITE

MASTERBATCH

BP is manufacturing White Masterbatch with excellent quality Titanium Dioxide (RUTILE GRADE) from DUPONT.

BP masterbatches are suited for applications requiring good dispersion & high opacity. They are recommended for thick to thin film that require good surface finish & surface gloss, applicable in Lamination & Moldings.

APPLICATIONS OF BP WHITE MB:

- Single & multilayer PE films
- PP, HDPE Tapes & Monofilament
- Bi-Axially Oriented and Cast PP films
 - Laminated Tarpaulin
- Injection & Blow molded items

ADDITIVE

MASTERBATCH

BP additive masterbatches offer remarkable opportunities to improve the performance of plastic products.

THE MAIN ADDITIVES IN THIS RANGE ARE:

- Special Additives like Optical Brighteners.
- Blowing Agent, PP Clarifying Agent, and Antistatic Agent.
- UV Stabilizers and Antioxidant MB.
- Processing Aid, Slip MB, Antilock MB.
- Flame Retardants MB for PE & PP Compound.

BP FLAME RETARDANTS Additive masterbatches can prevent degradation due to heat and shear during processing as well as UV light and oxidation in the end-use environment. They can limit flammability to comply with key regulations.

BP OPTICAL BRIGHTENERS Convert UV radiation into visible, bluish light to improve the surface whiteness of plastics used in molded or extruded products and fibers.

BP PROCESSING AIDS Are used in extrusion to coat inner die surfaces to reduce friction and prevent melt fracture and die build-up when extruding LLDPE and other difficult-to-process films.

BP ANTISTATIC AGENT Static charges that build up on the surface of plastic products attract dust and dirt, cause sheet and film to cling and stacked products to stick together. A sudden discharge of static can damage products like computer chips or even cause a fire or explosion in hazardous areas. BP anti-static agents help avoid these problems, while also improving process ability and mold release.

VISION OF THE COMPANY

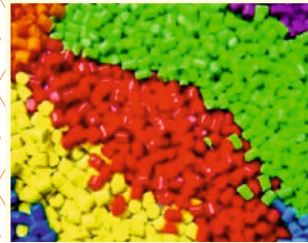

- To produce compound of highest quality standard with the help of advanced Technology and expertise of well experienced personnel to meet challenging and ever changing market environment.
- To fulfill the demand of customers and focusing all our action towards total customer satisfaction.
- To honour our commitments to the best of our ability.
- Our vision is statement of what we stand for. It reflects our interaction & activates relationship with all our stakeholders.
